

# DON'T FEAR CLOUD MIGRATION

*K2 Appit™ for SharePoint is a perfect fit for cloud, on premise, or hybrid SharePoint environments*

Is your company ready to start benefiting from the proven results of cloud services, but the fear of migration holds you back from taking advantage of all SharePoint Online has to offer? If so, these hesitations probably sound familiar:

- I need assurance that we won't lose data during the transition and that it will be safe once it lives in the cloud.
- I need to keep the business up and running and employees productive during the transition to the cloud.
- It's daunting and complex to decide why, how and when each system and operation should stay on premises or move to the cloud.

## K2 APPIT FOR SHAREPOINT HELPS CALM MIGRATION CONCERNS

K2 Appit for SharePoint is a cloud-based service that helps you deliver SharePoint-based workflows and forms that span systems, both on premises and in the cloud, without writing code.

Appit works the same wherever your SharePoint lives which can help ease migration concerns:

1.

**Security:**  
Keep existing security and governance policies in place.

2.

**Productivity:**  
Surface the data that people need to get work done anywhere, no matter where that data is during the cloud migration.

3.

**Flexibility:**  
Protect and support existing data and assets, while sending new SharePoint development to the cloud.

---

**Q: Do I have to migrate my SharePoint 2013 environment to SharePoint Online all at once?**

**A: No, in fact, it may be advisable to migrate your SharePoint environment in stages in order to avoid massive disruptions and to solve problems in a measured way as you go.** K2 Appit for SharePoint works seamlessly with both on premises and SharePoint Online environments, so companies can keep information flowing without losing any of the SharePoint business process capabilities they need. Read the [K2 cloud migration guide](#) for more tips to ease the transition.

---

**Q: Cloud migration takes time, but we cannot afford to shut down business for weeks. Will my users still be able to work when we begin transitioning to the cloud?**

**A: Yes. K2 Appit for SharePoint is up and running quickly, so you can start building and using solutions immediately.**

- Flexible form design allows you to surface information from SharePoint and line-of-business (LOB) systems to only those people who should see it.
  - Build workflows that work now and in the future, regardless of your final environment, be it all cloud or a hybrid solution.
  - Auditing and reporting capabilities let users and management teams gain insight into exactly what is happening as part of any SharePoint business app.
  - Mobile-friendly SharePoint business apps that can integrate with all LOB systems and SharePoint lists and libraries help keep workers productive.
- 

**Q: Will K2 Appit for SharePoint work as our company grows and changes? Our requirements and personnel level of expertise change all the time.**

**A: K2 Appit for SharePoint is a flexible solution for building processes in SharePoint. Reduce process inefficiencies with customizable workflows that can be changed as quickly as business demands change.**

- The enterprise-class workflow engine lets you create and deploy apps that fit your organization's needs exactly.
  - Simple enough for small businesses and robust enough for large enterprises.
  - Build components that are reusable across all your applications, so changes are made once and automatically surfaced in all your applications.
- 

**Q: Can I maintain my current compliance and governance security measures in the cloud?**

**A: Yes, Appit is designed to keep your existing compliance and security measures in place. Read our [security datasheet](#) to learn more about how K2 protects your data in the cloud.**

- LOB data is not copied or stored in the Appit environment, preserving your existing compliance and security measures.
- Audit logs and built-in tracking ensure that you stay in compliance with policies and regulations that are specific to your organization.
- Workflows that can handle the flow of information and ensure a standard process is followed every time.
